Professional Summary

Full Stack Software Engineer with 2+ year of professional experience at FIS Global designing and developing scalable distributed systems, real-time data pipelines, and responsive web applications. Proficient in Java, Spring Boot, Microservices architecture, and Angular. Skilled in building end-to-end solutions from RESTful backend APIs to frontend interfaces, improving system performance, reliability, and user experience. Experienced in Agile development environments, CI/CD pipelines (Jenkins), messaging systems (ActiveMQ), and cloud-based deployments. Strong foundation in Data Structures, Algorithms, Object-Oriented Programming, and System Design.

Technical Skills

Programming Languages: Java, C++, SQL

Core Concepts: Data Structures and Algorithms, Object-Oriented Programming (OOP), DBMS, System Design

Backend Frameworks: Spring Boot, Spring, Spring Data JPA, Microservices, REST API, SOAP API, Servlets, JSP

Messaging & Streaming: ActiveMQ (Message Broker, Event-Driven Architecture)

Frontend Technologies: Angular.js, Responsive UI Design

Databases: MySQL

DevOps and Tools: Git, GitHub, Jenkins, CI/CD Pipelines, Linux, Docker(Basic), Maven

Cloud and Certifications: Microsoft Azure (AZ-900 Certified)

Experience

Software Engineer | FIS Global

Pune, India

July 2024 – Present

Full Stack Java Developer / Spring Boot / Angular / ActiveMQ / MySQL / Jenkins

- Built a scalable automation service to ingest and process Remedy data across multiple sources, implementing deduplication logic using last-modified timestamps and handling complex edge cases, reducing manual effort by **50%+**.
- Designed and implemented real-time event-driven data pipelines using ActiveMQ message broker, enabling asynchronous communication between microservices and improving data processing efficiency by **30%+**.
- Developed an automated log collection and centralized analysis system by streaming client logs via ActiveMQ, improving issue resolution time by **30%+** and reducing mean time to resolution (MTTR).
- Resolved critical production incidents by collaborating cross-functionally with CX, DI, and EPROD teams, improving system reliability and reducing unplanned downtime.
- Designed and developed a Data Catalog module with Role-Based Access Control (RBAC), improving data visibility, governance, and usability for enterprise clients.
- Worked on UI data integration and visualization layers using Angular, ensuring efficient data rendering and seamless user experience for client-facing applications.
- Automated file transfer workflows and log cleanup processes using scripting and scheduling mechanisms (Cron), reducing operational overhead and manual intervention.
- Developed Java and SQL-based solutions to manage wildcard configurations across client databases, enabling scalable, controlled, and auditable data access patterns.
- Contributed to CI/CD pipelines using Jenkins, streamlining build, test, and deployment workflows to improve deployment speed and release efficiency.
- Designed and maintained high-volume data processing systems with a focus on scalability, fault tolerance, and high availability principles.

Projects

MoneyMate – Personal Finance Tracker

Java, Spring Boot, Spring Security, JWT, Angular, MySQL, REST API

- Developed a full-stack personal finance management application to track income, expenses, and categories, with secure JWT-based authentication and authorization using Spring Security.

- Designed and implemented RESTful APIs using Spring Boot; optimized MySQL queries with indexing and proper schema design for efficient data retrieval and reporting.
- Built a fully responsive Angular frontend with real-time data updates, filtering, and performance-optimized rendering for a smooth end-user experience.

QuickInvoice – Invoice Generation Platform

Java, Spring Boot, Angular, MongoDB, SMTP, REST API

- Developed a full-stack invoice generation platform with real-time PDF preview and export functionality, supporting end-to-end invoice lifecycle management.
- Integrated JWT-based authentication, SMTP email delivery, and cloud storage for seamless and automated invoice management workflows.
- Designed dynamic UI components in Angular and RESTful backend services, ensuring scalable data handling, improved performance, and high usability.

Achievements

- Solved **300+ problems** on LeetCode, demonstrating strong problem-solving and algorithmic skills.
- Active member of MIT CodeChef Club; mentored peers and contributed to coding events.

Education

B.Tech in Computer Science

MIT ADT University, Pune

CGPA: 8.34

12th (Science - Maths)

Govt. Sr. Sec. School

84.20%

Certifications

- Java Programming and Data Structures – HackerRank
- Microsoft Azure Fundamentals (AZ-900)
